### Edit Cluster Settings | mycluster

**Warning:** This cluster has scheduled tasks that might override your changes. Your configuration might be lost when the tasks run.

vSphere DRS

**Automation** | Additional Options | Power Management | Advanced Options

Automation Level: **Fully Automated**  
 DRS automatically places virtual machines onto hosts at VM power-on, and virtual machines are automatically migrated from one host to another to optimize resource utilization.

Migration Threshold: **Conservative** (slider) | Aggressive  
 DRS provides recommendations when workloads are moderately imbalanced. This threshold is suggested for environments with stable workloads. (Default)

Predictive DRS:  Enable

Virtual Machine Automation:  Enable

**CANCEL** **OK**

## New vApp

## 1 Select creation type

2 Select a name and location

3 Resource allocation

4 Review and finish

## Select creation type

- Create a new vApp  
This option guides you through creating a new vApp. You will be able to customize CPU and memory resources.
- Clone an existing vApp  
This option guides you through creating a copy of an existing vApp. You will be able to customize the vApp settings.
